during the 1980s economic theory was revolutionized by game theory the game theory approach is now widely used becoming a major tool in the construction of a modern theory of

industrial organization this is a collection of papers on the development and application of game theory in economics

we develop a tractable framework for the analysis of the relationship between contractual incompleteness technological complementarities and technology adoption in our model a firm chooses its technology and investment levels in contractible activities by suppliers of intermediate inputs suppliers then choose investments in noncontractible activities anticipating payoffs from an ex post bargaining game we show that greater contractual incompleteness leads to the adoption of less advanced technologies and that the impact of contractual incompleteness is more pronounced when there is greater complementary among the intermediate inputs we study a number of applications of the main framework and show that the mechanism proposed in the paper can generate sizable productivity differences across countries with different contracting institutions and that differences in contracting institutions lead to endogenous comparative advantage differences
